# Optics Test '08

This year's crop of scopes and binos features ED glass, ballistic reticles and compact brilliance

You might not think you need extra-low-dispersion glass in a riflescope... until you try to distinguish a buck from the branches of a twilit woods. Then the advantages of high-quality optics become clear. Fact is, when you're ready to pull the trigger, the lenses are just as important as the crosshair itself. This year, you'll find more high-quality glass for your money than ever before.
